Creating a Product Item in PIQO Portal

Version 2.1.0.0

11/08/2018

Prior to creating a new "Product Item", developers should already have an existing "Product". In addition, this product should already be approved by PIQO administrator and payment accesses should be granted to each product. After logging into the portal as a developer, select "Products" section from "Developers'" menu. Then click on the previously created product, and select the "Create a New Product Item" tab.

Keep in mind that the developers should already have received "Service Details" sent to them by the system administrator and only then they can proceed with implementation of this document.

Fill the fields in the form as follows:

- **درگاه پرداخت**

    Select the operator platform your product item will be using. If you are not sure about this, ask system administrator via a ticket.

    Based on your choice, a number of fields will appear on the bottom of the page and they can be filled by using the "Service Details" information sent by the administrator.

- **نوع سرویس**

    Choose if your service is of subscription and/or on-demand type. Note that if you have both service types, two distinct product items should be created.

- **نام**

    Define a custom name for your product item.

- **توضیحات**

    Briefly describe your application

- **دارای بازه ی قیمتی**

    Check this if your service has a price range. If yes, the following fields will be visible.

    - کمینه ی قیمت

        Minimum price defined for the service in the operator side.

    - پیشینه ی قیمت

        Maximum price defined for the service in the operator side.

- **مبلغ**

    The price of the service.

- **تاریخ شروع**

    Starting time of the service (revenue generating).

- **تاریخ اتمام**

    Ending time of the service (revenue generating).
